

An environmental friendly way of car recycling!

Car Recycling Systems (CRS) is the inventor of the ultimate Car Dismantling System. It is a **large scale dismantling system**

to dismantle up to 10,000 cars a year (200 a week). It is both a **smart way of working**

in a

specific order

as it provides the

right tools

for the right job. It's like a reversed car assembly line.

[**This patent for \(North\) America is now for sale!**](#)

CRS is selling its patent. **Until the patent is sold CRS keeps selling [individual dismantling lines](#)** !

Please [contact us](#) if you are interested in the Car Dismantling System instead of the patent or [click here](#)

It has never been **easier, cheaper and faster** to dismantle a car and recycle the parts. CRS proves that **environmental** **financial benefits and saving the environment** go along very well.

- Large scale dismantling so separated materials can be marketed as raw materials or parts... **good for your wallet.**
- Reduction of unnecessary environmental damage because car wrecks are dismantled and not shredded (included pieces of rubber, plastic, textile, glass, oils, etc.)... **good for the environment!**
- Safe and labor friendly working conditions because the CRS line is build around the human instead of the other way around. No more bending, stretching and crawling... **good for the employees!**

- Very low DCC (dismantling costs per car)... **good for a competitive advantage!**

Potential market. Americans own more than 240 million cars! If they can be dismantled using the most efficient and most environmental friendly possible way (CRS line) every 15 year (assuming this is the average life time of a car) **it takes 1,600 CRS lines** to do the job. So this patent is really worth buying!
