

Car Recycling Systems B.V. offers a unique chance to create a competitive advantage.

Car Recycling Systems (CRS) is the inventor of the ultimate Car Dismantling System. It is a **large scale dismantling system**

to dismantle up to 10,000 cars a year (200 a week). It is both a

smart way of working

in a specific order as it provides the

right tools

for the right job. It's like a reversed car assembly line. People laughed a Henri Ford's T-Ford assembly line over a hundred years ago. Today it is the car

industry's standard

!

It has never been **easier, cheaper and faster** to dismantle a car and recycle the parts. CRS proves that **financial benefits and saving the**

environment

go along very well.

The Car Dismantling System gave CRS an competitive advantage for the last 20 years. They are Holland's largest car dismantling and recycling company.

The buyer of this patent is has the full rights to sell and/or manufacture these car dismantling lines in North America for a onetime fee. Call us for more information.

Potential market. Americans own more than 240 million cars! If they can be dismantled using

the most efficient and most environmental friendly possible way (CRS line) every 15 year (assuming this is the average life time of a car) **it takes 1,600 CRS lines** to do the job. So this patent is really worth buying!
